The Intelligent Edge in Secondaries

Fund secondaries, simplified.

AT A GLANCE

Liqvity is building a technology platform for institutional sellers, buyers and general partners participating in LP-led secondary processes. It brings controlled counterparty access, staged diligence, standardised bidding, process visibility and transfer execution into one structured, confidential environment.

As private market portfolios mature, fund secondaries are becoming an increasingly important tool for liquidity, portfolio rebalancing and exposure management. Yet many LP-led processes still rely on fragmented email threads, spreadsheets, data rooms and bilateral coordination. Liqvity is being developed to replace that fragmentation with dedicated digital infrastructure.

01	02	03	04
Controlled access	**Staged diligence**	**Standardised bidding**	**Disciplined execution**
Invite relevant counterparties and govern participation by eligibility and process stage.	Release seller-controlled and GP-sensitive information according to permissions, NDAs and progression.	Capture price, size, timing, conditions and settlement terms in consistent formats.	Coordinate decisions, consents and transfer steps within an audit-ready process trail.

COMPANY DESCRIPTIONS

Short description

Liqvity is building the technology infrastructure for LP-led fund secondaries

Standard description

Liqvity is a product built for institutional LP-led secondary processes involving private fund positions. It offers structured and confidential execution where discretion, buyer relevance, staged disclosure, bid comparability and process visibility matters

Why Liqvity

LP-led secondaries require more than buyer interest. They require disciplined coordination across access, information, bidding, approvals and execution.

I

A growing portfolio-management tool

As private market portfolios mature, institutional investors increasingly use fund secondaries to create liquidity, rebalance exposures, manage concentration and recycle capital.

II

Execution has not kept pace

Processes remain fragmented across email, spreadsheets, data rooms and bilateral communication. A costly gap when confidentiality, buyer eligibility, GP consent, internal approvals and transfer documentation all need careful coordination.

III

Dedicated infrastructure for LP-led execution

Liqvity is being developed to bring the process into one controlled environment. The platform supports curated counterparty access, staged disclosure, structured bid comparison, process visibility and an audit-ready process trail.

IV

A curated environment

Participation is governed by mandate relevance, eligibility, permissions and process stage. Confidentiality and selectivity remain central throughout.

What we are building

Liqvity is being developed around the practical requirements of LP-led position transfers, from initial access through diligence, bidding and execution.

Controlled access → Staged diligence → Standardised bidding → Disciplined execution

BUILT FOR THE PARTICIPANTS IN AN LP-LED PROCESS

SELLERS

Reach relevant institutional buyers while retaining control over participation, disclosure and process

Anonymity by default. Explore demand without disclosing seller identity to prospective buyers until the process advances to the binding phase.

Early price discovery. Assess buyer interest and pricing context before deciding whether to advance.

Structured bid comparison. Review bids consistently across price, size, timing and conditions.

BUYERS

Access curated mandate aligned opportunities and move end-to-end with consistent workflow

Mandate-aligned access. Focus on relevant opportunities across strategy, geography, size and other criteria.

Process visibility. Follow documents, diligence requirements, deadlines and next steps in one place.

Structured bid submission. Submit full or partial bids with key terms captured consistently.

GENERAL PARTNERS

Initiate liquidity processes for existing LPs or support transfers involving interests in your funds

Controlled involvement. Participate at the points required by fund terms, confidentiality arrangements or process design.

Information governance. Manage eligibility and access to GP-sensitive information separately from seller-controlled diligence.

Consent and execution. Coordinate approval and transfer-related steps within the same workflow.

ADVISORS

Stay ahead of your clients' needs by offering them access to Liqvity for their secondaries

Foster engagement and trust. Keep stakeholders, documents and dialogue in one place.

Invite-only or open to Liqvity's buyer pool. Sell your clients' stakes invite-only, or open the offering to Liqvity's broader buyer pool to build new relationships beyond your network.

Build out your network. Review bids consistently across price, size, timing and conditions.

Founding team

Liqvity was founded by a team combining deep market insights in institutional private markets, fintech-grade product and operating discipline, and strong technical expertise in building secure, scalable software.

Laura Andreasen
CEO, CO-FOUNDER

Laura brings more than a decade of experience from SEB, spanning institutional client coverage in both public and private markets. In private markets, she focused on fundraising and investor relations, working closely with institutional investors across Europe and developing a first-hand understanding of where processes remain opaque, fragmented and manual.

Laura Christoffel
COO, CO-FOUNDER

Laura brings operating experience to Liqvity. Having joined Pleo as a small team and helped scale it into a large scale-up, she has built processes from the ground up, implemented new systems, grown customer-facing teams, and led operational projects.

Ron Cohen
CTO, CO-FOUNDER

Ron brings the technical leadership behind Liqvity's platform. He co-founded Opbeat, an application performance management company acquired by Elastic in 2017, and later co-founded another venture-backed company. His experience spans product engineering, infrastructure software and scalable systems.
